# Vikram-32: India's First Indigenous Space Chip

At **Semicon India 2025**, Prime Minister **Narendra Modi** was presented with **Vikram-32**, India's first fully **indigenously developed 32-bit processor chip**. It was developed by the **Semiconductor Laboratory (SCL) of ISRO** in Mohali, Punjab. This marks a huge step towards India's dream of **semiconductor self-reliance**.

## **Key Highlights**

- First of its kind: India's first indigenous 32-bit processor.
- Built for Space: Specifically designed to survive the harsh conditions of space missions.
- **Tested in Space:** The first batch, called **Vikram 3201**, was successfully tested on the **PSLV-C60 mission**.
- Made in India: Fabricated and packaged at SCL's 180nm CMOS facility in Mohali.
- **Journey:** Introduced in March 2025; presented at Semicon India in September 2025.

## Why is it Important?

- Shows India's shift from just consuming chips to creating advanced chips.
- Supports India's **Semiconductor Mission (2021)** goal of becoming self-reliant in chip-making.
- Critical for space exploration, satellites, and launch vehicles.

# **Technical Features (Simplified)**

- **32-bit Design:** Can process data in chunks of 32 bits, making it powerful and efficient.
- **Handles Complex Numbers:** Works with numbers that have decimals (like 3.14), useful for space calculations.
- Space-Grade Durability: Built to withstand extreme heat, cold, and radiation in space.
- Multi-Tasking Capability: Can perform many operations at once, suitable for

## **FAQs**

#### Q1. What is Vikram-32?

It is **India's first fully indigenous 32-bit microprocessor chip**, designed for space missions.

#### Q2. Who developed it?

The Semiconductor Laboratory (SCL) of ISRO, Mohali.

#### Q3. Where was it tested?

On the **PSLV-C60 mission**, where it was validated successfully in space.

#### Q4. Why is it special?

Because it is **completely designed and made in India**, proving India's progress in chip technology.

#### Q5. What makes it suitable for space?

It can withstand extreme temperatures, radiation, and vibrations in space.

#### Q6. Where is it made?

At SCL's 180nm CMOS facility in Mohali, Punjab.

#### Q7. How does this help India?

It reduces dependence on foreign chips and boosts India's **Atmanirbhar Bharat (self-reliance)** in advanced technology.
